

1. **příklad.** Definujeme

$$F(a) = \int_0^{\pi/2} \ln \left(\frac{1 + a \cos x}{1 - a \cos x} \right) \frac{dx}{\cos x}.$$

- (i) pro která $a \in \mathbb{R}$ je rozumné uvažovat tento integrál a proč ?
- (ii) derivujte podle a — podrobně ověřte předpoklady věty.
- (iii) dopočítejte $F(a)$.

2. **příklad.** Zobecněná křivka $\gamma \subset \mathbb{R}^2$ je definována jako hranice množiny

$$\{x^2 + y^2 < a^2\} \cap \{x > y\}$$

orientovaná v kladném smyslu. Spočítejte křivkový integrál 2. druhu $\int_{\gamma} F \cdot ds$, kde $F = (y^2, x + 2xy)$

- (i) přímo z definice, tj. pomocí vhodné parametrizace γ
- (ii) pomocí Greenovy věty

(iii) ověřte vztah $d\Phi^*(\omega) = \Phi^*(d\omega)$, kde $\omega = xdy \in E^1(\mathbb{R}^2)$, a $\Phi : (u, v, w) \mapsto (x, y)$ je určeno vztahy $x = u + v - w$, $y = u^2$.

3. **příklad.** Je dána úloha

$$\Phi(y) = \int_0^1 (y')^2 \sqrt{1 - x^2} - 2y \, dx$$

$$y(0) = 2, \quad y(1) = \sqrt{3}.$$

- (i) najděte *všechny* extrémaly
- (ii) vyšetřete, jaký druh extrému představují

4. **příklad.** Funkce f je *lichá*, 2π -periodická, a platí

$$f(x) = x^2 \quad \text{pro } x \in [0, \pi).$$

- (i) spočítejte Fourierovy koeficienty
- (ii) napište Fourierovu řadu
- (iii) nakreslete graf $f(x)$ na intervalu $[0, 2\pi]$
- (iv) zformulujte větu o konvergenci Fourierovy řady; vysvětlete podrobně (příp. nakreslete), co z ní plyne v daném případě
- (v) napište Parsevalovu rovnost: obecně a pro danou funkci

$$\textcircled{1} F(a) = \int_0^{\frac{\pi}{2}} \ln \left(\frac{1+a \cos x}{1-a \cos x} \right) \frac{dx}{\cos x}; \quad a \in (-1, 1).$$

$$\frac{\partial f(a, x)}{\partial a} = \frac{2}{1-a^2 \cos^2 x};$$

mejorante: $a \in (-\eta, \eta)$; $\eta \in (0, 1)$ fijo:

$$\left| \frac{\partial f}{\partial a} \right| \leq \frac{2}{1-\eta^2} \in L^1(0, \frac{\pi}{2}).$$

$$f(0, x) \equiv 0 \in L^1(0, \frac{\pi}{2}).$$

reemplazando: $\int_0^{\frac{\pi}{2}} \frac{2}{1-a^2 \cos^2 x} dx \quad \left| \begin{array}{l} t = \tan x \in (0, \infty) \\ dx = \frac{dt}{1+t^2}; \cos^2 x = \frac{t^2}{1+t^2} \end{array} \right.$

$$\frac{2}{1-a^2 \frac{t^2}{1+t^2}} \cdot \frac{1}{1+t^2} = \frac{2}{1+t^2-a^2 t^2} = \frac{2}{(1-a^2)t^2+1};$$

entonces: $\int_0^{\infty} \frac{dy}{a^2 y^2 + 1} = \frac{\pi}{2\sqrt{a}}$
